Funds

Overview Of The German Funds Market

IS.Statistics Funds allows individual and up-to-date funds evaluations

Frankfurt am Main, June 22, 2006 – IS.Teledata AG, managed solutions provider for customizable financial market information systems, has launched its new application IS.Statistics Funds. The web-based software enables users to survey daily sales on the German funds market in customized overviews available the next day. The product's calculations are based on inflows and outflows of funds for selected time periods. Capital investment companies benefit from the statistics to optimize their funds offering according to market trends and to enhance their product marketing with market information. Research departments use IS.Statistics Funds in order to help them determine general trends and details of developments in the funds market. IS.Statistics Funds is also helpful for retail banks that seek to promote funds sales by recommendations based on the currently popular investment funds. Funds are still the favorite type of investment among private investors in Germany.

IS.Statistics Funds can be used at every desktop with access to the Internet. It features individually customizable, up-to-date reports. Several selection criteria and comprehensive information are available for each fund. Users can freely select time periods for the evaluation of investment focus, fund type, fund group, capital investment company, investment region, currency and sustainability. Reports include inflows and outflows of funds as well as the fund volume. IS.Statistics Funds also allows the user to compare individual funds with benchmarks such as market segment, overall market or capital investment company. Results can be displayed in the browser or exported as CSV. Frequently used reports can be preconfigured.

In its current edition, IS.Statistics Funds contains funds data of 300 capital investment companies whose funds are available in Germany. The data coverage will be extended continuously. The data is supplied by software-systems.at, an Austrian market leader in funds data research. The analytical and search functions, as well as the market data platform used by the web-based software, are operated by IS.Teledata. IS.Teledata has successfully been distributing the statistics product IS.Statistics Derivatives on its market data platform IS.MarketDataGateway.
