

## PRESS RELEASE

### **Internet Portal of boerse-stuttgart Presents New Look & Feel**

**Frankfurt, March 04th, 2004** – The online portal of boerse-stuttgart presents a new look and feel since January. Based on specifications of the agency Sommer & Sommer, IS.Teledata, Europe's leading provider of Internet-based financial information systems, implemented a new design for the portal of Germany's leading exchange for private investors. The new web site will be introduced to the investing public at Invest 2004, the investor trade fair in Stuttgart in early March.

At [www.boerse-stuttgart.de](http://www.boerse-stuttgart.de) private investors can access market information for all securities traded at German exchanges. For the Stuttgart exchange, registered users receive real-time data. Coverage focuses on derivatives like plain vanilla warrants, knock-out products, exotic products, investment certificates and reverse convertibles. A new feature is the real-time Stuttgart Blue Chip Indicator (SBCI), which tracks the development of the 30 largest German stocks. Portfolio functions, watch lists and charting round out the range of information for private investors.

The boerse-stuttgart.de web site is hosted in the Frankfurt computer centre of IS.Teledata AG. IS.Teledata receives market data directly from the Stuttgart exchange and other data sources, processes them and serves them on request to Internet users.
